SPECIAL

Recommendations:

1. Start with rough, medium and fine grinding as necessary using SKORPIO Flap Discs.
 2. Then prepare the surface using SKORPIO SuperFinish Flap Discs.
 3. Clean the surface thoroughly.
 4. Polish it with the SKORPIO Special Polishing Disc using the appropriate polishing paste in order to reach the desired surface quality, in one or more stages.
- Clean the surface well between individual phases of polishing!
The SKORPIO polishing product should always be used with only one quality (colour) of the paste.

Advantages of polished surface:

- Smooth surface,
- Easier filling of moulds with melted material (plastic),
- Reduced risk of local corrosion,
- Reduced risk of breakage.

Quality of polishing – the degree of roughness depends on:

- Quality of the basic material – steel,
- Prior heat treatment of the basic material,
- Surface preparation,
- Used polishing technique.
